Team Information

	V	Lynn	Collin
Contact details	Ph: 0492848012 Email: vfil0001@student.monash.edu	Ph: 0413174855 Mail: lthi0009@student.monash.edu	Ph: 0467087821 Mail: chic0003@student.monash.edu
Technical Strengths	I have some experience working with Java, C#, and Python (including Tkinter), also, even though not entirely relevant, I have also done a couple of web projects before, so I've got some PHP, JS, SQL, and AWS DevOps experience. Knowledge of OOP and DRY is a given.	I have learnt Java and Python, including object oriented principles.	I have some knowledge in java, python, c++, swift, javascript. I know object oriented programming and project planning principles.
Professional Strengths	I can learn and adapt really fast.	I can work effectively with the group members to complete the tasks on time.	I am able to lead if necessary and can also work to complete what is delegated within strict deadlines. I can work well with teammates.
Fun Fact	I enjoy reading books whenever I have free time, even though I've been getting hardly any lately.	I enjoy watching movies and cooking at home.	I collect indoor plants as one of my hobbies
Java Expertise + Assistance Needed	I feel quite confident about my Java backend skills. If I ever get stuck, I'll just refer to the documentation, or browse through StackOverflow.	I would seek consultations or guidance from tutors to improve understanding if I need help.	I can apply object oriented principles and create a working backend but have less experience connecting it with a functioning front end. I will most likely need to consult with TA's.

Programming Language & Justification

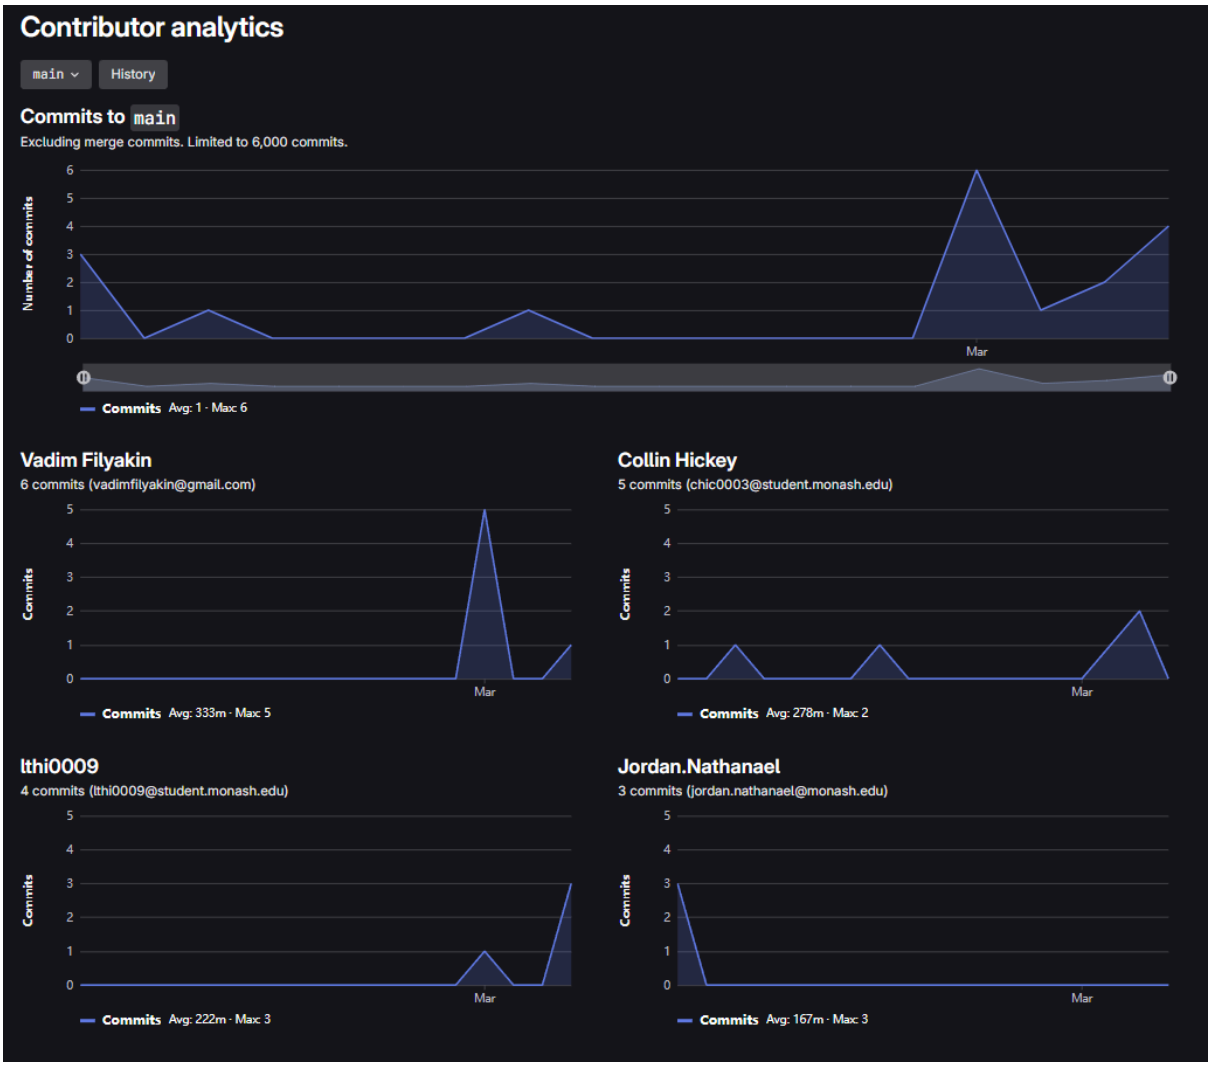

Language Chosen: Java
Justification: Java's ability to enable a class to inherit from both an abstract class and multiple interfaces streamlines the development process significantly. Moreover, the implementation of Factory patterns in Java is way more intuitive than in Python. All of us have more experience with Java and are more comfortable creating programs with it.

Team Schedule & Workload Distribution

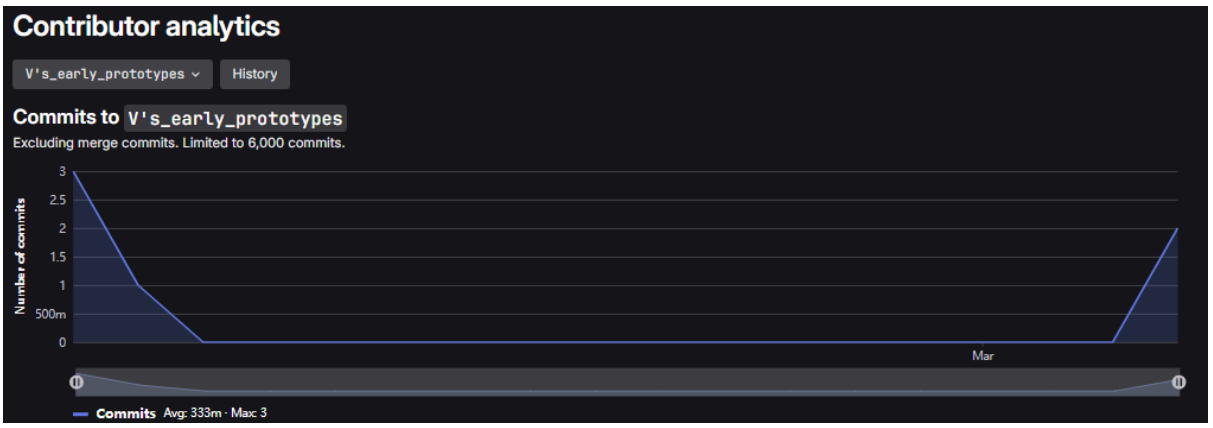

Date	Discussions	Workload Distribution
12/03/2025	- User stories divided among members (8 each) - Shared documents/drive created - Team name decided - Meeting time decided - Discussed prototyping, plans to create board and movement	User Stories (V, Collin, Lynn) Team Info (V, Collin, Lynn)
19/03/2025	- Step through each stage of santorini game and match user stories to basic functions - Setup lucid chart domain model file - Upload to git	Task 1 Prototype discussion (V, Collin, Lynn)
25/03/2025	- Progress Update - Same workload distributed	INVEST (Collin, Lynn) Domain Model (V) LowFi Proto (Collin, Lynn)
01/03/2025	- In class discussion/refinement about domain model and lowfi prototypes - Team photo	LowFi Proto Check (V) Domain Model Check (Lynn, Collin)
03/03/2025	- Contribution Log updated fully - All deliverables checked - Team member set to submit tomorrow	Prepare for submission (V, Lynn, Collin)
